CONTENTS

Treatment of epilepsy in adults: expert opinion, 2005 <i>Steven Karceski, Martha J. Morrell, and Daniel Carpenter</i>	S1
Expert consensus panel	S2
Introduction	S3
Methods	S4
Overview of results	S6
I. Overall strategies	
1. Idiopathic generalized epilepsy	S9
2. Symptomatic localization related epilepsy	S10
II. Initial strategies	
3. Idiopathic generalized epilepsy	
3A. Survey results	S11
3B. Medication recommendations	S22
4. Symptomatic localization related epilepsy	
4A. Survey results	S23
4B. Medication recommendations	S33
III. Combination therapy	
5. Idiopathic generalized epilepsy	
5A. Survey results	S34
5B. Medication recommendations	S38
6. Symptomatic localization related epilepsy	
6A. Survey results	S39
6B. Medication recommendations	S45
IV. Special patient populations and other treatment issues	
7. Women in the reproductive years	
7A. Survey results	S46
7B. Medication recommendations	S50
8. Elderly patients	
8A. Survey results	S51
8B. Medication recommendations	S52
9. Patients with comorbid conditions	
9A. Survey results	S53
9B. HIV	S59
9C. Depression	S59
9D. Renal disease	S59
9E. Hepatic disease	S59
10. Seizures in the emergency department	S60
11. Driving and epilepsy	S61
Discussion	S62
References	S63
CME posttest and evaluation	S65

Expert Consensus Panel

The following participants in the Expert Consensus Survey were selected based on recent publications and represent a geographic cross section of the United States. Of the 48 experts to whom we sent the epilepsy survey, 43 (90%) replied; 29 (67%) were also respondents to the 2001 epilepsy survey. The recommendations in this publication reflect the aggregate opinions of the experts and do not necessarily reflect the opinion of each individual on each question.
