## The Expert Consensus Panel for Using Antipsychotic Agents in Older Patients

The following participants in the Expert Consensus Survey were identified from several sources: recent research publications and funded grants, and participants in previous Expert Consensus surveys on the treatment of older patients. Of the 52 experts to whom we sent the survey (38 geriatric psychiatrists and 14 geriatric internists/family physicians), 48 (92%) replied (36 geriatric psychiatrists and 12 geriatric internists/family physicians). The recommendations in the guidelines reflect the aggregate opinions of the experts and do not necessarily reflect the opinion of each individual on each question.
