Disclaimer. Any set of guidelines can provide only general suggestions for clinical practice and practitioners must use their own clinical judgment in treating and addressing the needs of each individual patient, taking into account that patient’s unique clinical situation. There is no representation of the appropriateness or validity of these guideline recommendations for any given patient. The developers of the guidelines disclaim all liability and cannot be held responsible for any problems that may arise from their use.

The Expert Consensus Panel for Bipolar Disorder

The following participants in the Expert Consensus Survey were identified from several sources: recent research publications and funded grants, participants in previous expert consensus surveys on the treatment of bipolar disorder, and individuals who have worked on other mood disorder guidelines. Of the 50 experts to whom we sent the bipolar disorder survey, 47 (94%) replied. The recommendations in the guidelines reflect the aggregate opinions of the experts and do not necessarily reflect the opinion of each individual on each question.
